PROFESSIONAL SUMMARY

Backend Software Engineer with expertise in Ruby on Rails and Java-based web applications. Demonstrated ability to develop scalable backend systems and optimize financial workflows within logistics platforms. Currently serving as a Software Engineer II focused on Fleet Enable platform development at Imaginnovate.

TECHNICAL SKILLS

Ruby • Ruby on Rails • ActiveRecord • RSpec • MVC Architecture • RESTful API Design • Core Java • Advanced Java • Spring Boot • Git • GitHub • Jira • Hibernate • Background Processing • Database Management • API Development • MongoDB • SQL • Test-Driven Development

AI TOOLS & MODELS

Learning & Hands-on Exposure

Actively learning and using AI models and developer tools to enhance productivity and problem-solving.

Tools Experience: Z.ai, Claude, Gemini, Vibe, Cursor, Cline, WindSurf, Rootcode for code assistance, refactoring, debugging, and design exploration.

PROFESSIONAL EXPERIENCE

Software Engineer II | Imaginnovate | FleetEnable Product

April 2025 - Present (10 mos)

- Consistently contribute backend expertise to the Fleet Enable platform using Ruby on Rails.
- Design and deliver reliable, high-quality, and scalable backend solutions to support complex logistics operations.
- Build and maintain robust infrastructure for financial workflows, including billing, invoicing, and settlement systems.
- Apply ActiveRecord, RSpec, and MVC design patterns to develop clean, testable, and maintainable code.

Backend Software Engineer | Imaginnovate | FleetEnable Platform

Nov 2023 - Mar 2025 (1 yr 5 mos)

- Developed and maintained backend services for the Fleet Enable logistics platform using Ruby on Rails.
- Built scalable billing and settlement systems to support complex logistics and financial operations.
- Optimized financial workflows to ensure accuracy, performance, and efficiency across end-to-end logistics processes.

Software Engineer Intern | Imaginnovate

Aug 2023 - Oct 2023 (3 mos)

- Trained in Java backend development including Core Java, Advanced Java, Spring Boot, and Hibernate
- Gained hands-on experience in building and integrating scalable backend applications

EDUCATION

B.Tech in Computer Science & Engineering | IIIT SKLM, Rajiv Gandhi University of Knowledge Technologies | 2019 - 2023 | Grade: 9.4

Pre University Course (PUC - 11th & 12th) | IIIT SKLM, Rajiv Gandhi University of Knowledge Technologies | 2017 - 2019 | Grade: 9.7

6th - 10th Class | Z.P.Girls High School, Dwarapudi, East Godavari | 2014 - 2017 | Grade: 9.7

PROJECTS

Fleet Enable - Advanced Final Mile Logistics Platform | <https://fleetenable.com/>

Contributed to building and scaling backend services for a cloud-native Transportation Management System (TMS) tailored to final-mile logistics. Worked on key modules including order management, automated routing, dispatch, billing & invoicing automation, driver settlements, and API integrations to support real-time delivery operations and driver mobile functionality.

Technologies: Ruby, Ruby on Rails, MongoDB, Background Processing, API & Data Optimization

Student Enrollment System

The Student Enrollment System is a backend application designed to manage student registrations, course enrollments, and academic records efficiently. The system provides RESTful APIs to handle student data, course management, and enrollment workflows, ensuring data integrity and scalability.

Technologies: Java, Spring Boot, REST APIs, JPA, Hibernate, SQL/Databases, Swagger
