PROFESSIONAL SUMMARY

Ruby on Rails Developer with 3+ years of production experience in Rails 7, building scalable web applications and RESTful APIs. Proven track record of optimizing database performance by 60%, reducing API latency by 50%, and maintaining 99.9% uptime. Strong expertise in ActiveRecord, background jobs with Sidekiq, and test-driven development with RSpec. Experienced in full-stack development with PostgreSQL, MongoDB, and React.js. Passionate about clean code, performance optimization, and delivering high-quality software solutions.

KEY ACHIEVEMENTS

- Built scalable Rails applications processing 1000+ daily transactions with 99.9% uptime
- Optimized database performance by 60% through query optimization and indexing strategies
- Reduced API response time by 50% using caching strategies and Rails performance optimization
- Implemented secure billing workflows reducing errors by 80% through robust validation

RAILS EXPERTISE

- Ruby on Rails 7 development in production environment
- ActiveRecord advanced queries, associations, scopes, and N+1 query optimization
- Background job processing with Sidekiq for async tasks and scheduled jobs
- Rails security best practices: strong parameters, CSRF protection, secure headers
- Rails caching strategies: fragment caching, Redis caching for performance optimization
- API development with Rails: JSON serialization, RESTful design, proper error handling
- Database optimization: indexing strategies, query analysis, connection pooling with PostgreSQL and MongoDB
- Testing with RSpec: model specs, request specs, integration tests for code quality
- Rails deployment: Docker containerization, environment management, production debugging

TECHNICAL SKILLS

Languages: Ruby, JavaScript, SQL, HTML, CSS

Ruby on Rails: Ruby on Rails, ActiveRecord, Rails Controllers, Rails Views, Rails Routing, Rails Assets Pipeline

Backend: RESTful APIs, JSON APIs, Background Jobs, Sidekiq, Redis, API Authentication, API Versioning

Databases: PostgreSQL, MongoDB, ActiveRecord ORM, Query Optimization, Database Indexing, Data Migration

Testing: RSpec, Test-Driven Development, Unit Testing, Integration Testing

Frontend: React.js, JavaScript, HTML, CSS

DevOps & Tools: Git, GitHub, Docker, CI/CD, AWS, Linux, Postman API

Architecture: MVC Pattern, Service Objects, Concerns, Design Patterns

PROFESSIONAL EXPERIENCE

Software Engineer II | Imaginnovate – FleetEnable Product

April 2025 – Present

- Developed and maintained Ruby on Rails applications serving 1000+ daily users with 99.9% uptime.
- Optimized ActiveRecord queries and implemented database indexing, improving performance by 60%.
- Built RESTful APIs using Rails controllers and serializers with proper error handling and validation.
- Implemented background job processing using Sidekiq for async task handling and scheduled jobs.
- Reduced API response time by 50% through Rails caching strategies and query optimization.
- Wrote comprehensive RSpec tests ensuring code quality and preventing regressions.
- Participated in code reviews, refactoring, and Rails architecture discussions.
- Collaborated with frontend teams integrating React.js with Rails JSON APIs.

Backend Software Engineer | Imaginnovate – FleetEnable Platform

Nov 2023 – Mar 2025

- Built Rails backend for logistics platform handling order management and dispatch workflows.
- Engineered billing and settlement system processing thousands of financial transactions securely.

- Developed Rails services with PostgreSQL and MongoDB for multi-tenant data management.
- Implemented Rails strong parameters and security best practices for data protection.
- Created reusable Rails concerns and service objects for DRY code architecture.
- Integrated third-party APIs using Rails HTTP clients and background job processing.
- Optimized Rails assets and improved page load times through frontend optimization.
- Debugged production issues using Rails logs and monitoring tools.

Software Engineer Intern | Imaginnovate

Aug 2023 – Oct 2023

- Completed intensive training in backend development with Java, Spring Boot, and Hibernate.
- Developed REST APIs and learned MVC architecture patterns applicable to Rails development.
- Gained foundational knowledge in database design and API development best practices.

EDUCATION

B.Tech – Computer Science & Engineering | Rajiv Gandhi University of Knowledge Technologies (IIIT SKLM) | 2019 – 2023 | CGPA: 9.4

PROJECT EXPERIENCE

FleetEnable – Final Mile Logistics Platform | <https://fleetenable.com/>

Built Rails backend for Transportation Management System supporting 1000+ daily deliveries. Developed RESTful APIs for order management, dispatch workflows, and driver tracking. Implemented background jobs with Sidekiq for async operations. Used PostgreSQL for transactional data and MongoDB for flexible schema data.

Technologies: Ruby on Rails, PostgreSQL, MongoDB, Sidekiq, Redis, REST APIs, RSpec

Drayage Logistics Platform

Built Rails services for container transportation management. Created Rails controllers for order workflows and automated billing. Implemented ActiveRecord associations and scopes for complex data queries. Used Rails concerns for code reusability across models.

Technologies: Ruby on Rails, ActiveRecord, PostgreSQL, Sidekiq, Background Jobs

ZoneBud – Workforce Operations Platform

Developed Rails application for workforce tracking and site operations. Built APIs for location tracking, report generation, and admin dashboard. Implemented Rails authentication and authorization for role-based access control. Used MongoDB for flexible document storage.

Technologies: Ruby on Rails, MongoDB, REST APIs, Background Jobs, Authentication

Student Enrollment System

Built backend platform with Spring Boot (Java) for student registration. Applied MVC patterns and REST API design principles transferable to Rails development. Implemented comprehensive validation and API documentation.

Technologies: Java, Spring Boot, Hibernate, SQL, REST APIs, MVC Architecture
