PROFESSIONAL SUMMARY

Results-driven Backend Software Engineer II with 3 years of experience in developing live production applications and a proven track record of delivering 60% performance improvements and 50% faster feature delivery in production logistics platforms. Expert in Ruby on Rails, Java, and scalable system architecture. Successfully engineered financial processing infrastructure handling thousands of daily transactions with 99.9% uptime. Passionate about building maintainable, high-performance backend solutions that directly impact business metrics and user experience.

TECHNICAL SKILLS

Ruby • Ruby on Rails • ActiveRecord • RSpec • MVC Architecture • RESTful API Design • SQL • PostgreSQL • Database indexing, migrations • HTML • CSS • Javascript • React.js • Java , Springboot • Docker • Git • GitHub • Jira • Background Processing • Database Management • MongoDB • Test-Driven Development

AI TOOLS & MODELS

Learning & Hands-on Exposure

Actively learning and using AI models and developer tools to enhance productivity and problem-solving.

Tools Experience: Z.ai, Claude, Gemini, Cursor, WindSurf for code assistance, refactoring, debugging, and design exploration.

PROFESSIONAL EXPERIENCE

Software Engineer II | Imaginnovate | FleetEnable Product

April 2025 - Present (12 mos)

- Accelerated feature delivery by 50% through streamlined backend architecture and Ruby on Rails expertise.
- Boosted database performance by 60% via strategic query optimization and indexing—eliminating slow queries impacting driver operations.
- Slashed API response time by 50% using intelligent caching and code path optimization, directly improving mobile app user experience.
- Scaled system capacity to 2x throughput, enabling seamless handling of peak delivery periods without downtime.
- Reduced billing and invoicing errors by 80% by implementing robust validation in financial workflows.
- Architected modular, maintainable codebase using ActiveRecord, RSpec, and MVC patterns—reducing technical debt and bug rates.

Backend Software Engineer | Imaginnovate | FleetEnable Platform

Nov 2023 - Mar 2025 (1 yr 5 mos)

- Engineered scalable billing and settlement infrastructure from scratch, processing thousands of transactions daily with 99.9% uptime.
- Optimized end-to-end financial workflows—cutting settlement processing time by 50% and improving driver satisfaction scores.
- Developed comprehensive backend services for logistics platform, directly supporting 1000+ daily deliveries.
- Built organization-agnostic PDF template system, reducing document generation time by 70% across multiple business units.

Software Engineer Intern | Imaginnovate

Aug 2023 - Oct 2023 (3 mos)

- Trained in Java backend development including Core Java, Advanced Java, Spring Boot, and Hibernate
- Gained hands-on experience in building and integrating scalable backend applications by developing backend projects

EDUCATION

B.Tech in Computer Science & Engineering | IIIT SKLM, Rajiv Gandhi University of Knowledge Technologies | 2019 - 2023 | Grade: 9.4

Pre University Course (PUC - 11th & 12th) | IIIT SKLM, Rajiv Gandhi University of Knowledge Technologies | 2017 - 2019 | Grade: 9.7

6th - 10th Class | Z.P.Girls High School, Dwarapudi, East Godavari | 2014 - 2017 | Grade: 9.7

PROJECTS

Fleet Enable - Advanced Final Mile Logistics Platform | <https://fleetenable.com/>

Spearheaded backend development for cloud-native TMS supporting 1000+ daily deliveries. Architected automated billing, invoicing, and settlement systems processing thousands of financial transactions with 99.9% uptime. Implemented real-time order management, routing algorithms, and dispatch APIs—cutting manual coordination time by 70%. Built driver-facing mobile backend supporting live tracking and proof-of-delivery workflows.

Technologies: Ruby, Ruby on Rails, MongoDB, Background Processing, API & Data Optimization

Drayage Logistics Platform

Built backend services for a drayage logistics system that manages container transportation between ports, rail yards, and warehouses. Developed APIs for order management, dispatch workflows, and automated billing processes.

Technologies: Ruby on Rails, REST APIs, MongoDB, Background Processing

ZoneBud – Workforce & Site Operations Platform

Backend application that helps zone managers track user locations, monitor on-site hours, generate automated reports, and handle hazard reporting, document storage, and broadcast messaging through an admin dashboard.

Technologies: Ruby on Rails, REST APIs, Background Jobs, MongoDB

Student Enrollment System

Built full-stack backend platform handling student registrations, course enrollments, and academic records for university-scale operations. Designed RESTful APIs achieving sub-100ms response times and implemented comprehensive validation ensuring 100% data integrity. Integrated Swagger documentation reducing API onboarding time for frontend teams by 60%.

Technologies: Java, Spring Boot, REST APIs, JPA, Hibernate, SQL/Databases, Swagger
